### **Listing of Claims**

Claim 1-5 (cancelled)

Claim 6 (Withdrawn): A method of preparing a synthesized plasmid combined from at least two DNA fragments comprising:

- (a) preparing a linear replication origin DNA fragment;
- (b) preparing a linear selection marker gene DNA fragment;
- (c) combining the DNA fragments prepared from steps (a) and (b) to form a circular synthesized plasmid without using a whole existing plasmid as a structure template;
- (d) introducing the plasmid made from step (c) into a host cell; and
- (e) selecting the plasmid with appropriate replication origin and selection marker from transformed host cells.

Claim 7 (Withdrawn): The method according to claim 6, wherein any DNA fragment alone used for combining the synthesized plasmid cannot confer both autonomous DNA replication and selection to a plasmid.

Claim 8 (Withdrawn): The method according to claim 6, wherein the linear DNA fragments of steps (a) and (b) are prepared from polymerase chain reaction.

Claim 9 (Withdrawn): The method according to claim 6, wherein the linear DNA fragments of steps (a) and (b) are prepared from restriction digestion.

Claim 10 (Withdrawn): A method of using a synthesized plasmid comprising:

- (a) Linearizing the synthesized plasmid;
- (b) inserting one or more functional DNA fragments to the linearized plasmid to make other plasmids;
- (c) introducing the plasmids made from step (b) into host cells;
- (d) selecting the plasmids and host cells with desired properties; and
- (e) using the plasmids and host cells for biomedical applications.

Claim 11 (Withdrawn): The method according to claim 10, wherein linearizing the plasmid was achieved by restriction digestion.

Claim 12 (Withdrawn): The method according to claim 10, wherein linearizing the plasmid was achieved by PCR.

Claim 13 (Withdrawn): The method according to claim 10, wherein the functional DNA fragments encode a promoter, a regulatory sequence, a ribosome binding site, restriction sites, a terminator, a polypeptide, a replication origin, and a selection marker gene.

Claim 14 (Withdrawn): The method according to claim 10, wherein the desired properties are plasmid replication, selection, and the properties added by functional DNA fragments inserted from step (b).

Claim 15 (Withdrawn): The method according to claim 10, wherein the biomedical applications are DNA cloning, DNA amplification, gene expression, gene therapy, and DNA immunization.

Claim 16-25 (Cancelled)

Claim 26 (Previously presented): A synthesized plasmid comprising the DNA sequence defined by SEQ ID NO: 37.

Claim 27 (Previously presented): A DNA fragment comprising the plasmid according to claim 26.

Claim 28 (Previously presented): A DNA vector comprising the plasmid according to claim 26.

Claim 29 (Previously presented): A bacterial cell strain comprising the DNA vector according to claim 28.

Claim 30 (Previously presented): A eukaryotic cell line comprising the DNA vector according to claim 28.

Claim 31 (Withdrawn): A synthesized plasmid comprising the DNA sequence defined by SEQ ID NO: 39.

Claim 32 (Withdrawn): A DNA fragment comprising the plasmid according to claim 31.

Claim 33 (Withdrawn): A DNA vector comprising the plasmid according to claim 31.

Claim 34 (Withdrawn): A bacterial cell strain comprising the DNA vector according to claim 33.

Claim 35 (Withdrawn): A eukaryotic cell line comprising the DNA vector according to claim 33.

Claim 36 (Withdrawn): A synthesized plasmid comprising the DNA sequence defined by SEQ ID NO: 41.

Claim 37 (Withdrawn): A DNA fragment comprising the plasmid according to claim 36.

Claim 38 (Withdrawn): A DNA vector comprising the plasmid according to claim 36.

Claim 39 (Withdrawn): A bacterial cell strain comprising the DNA vector according to claim 38.

Claim 40 (Withdrawn): A eukaryotic cell line comprising the DNA vector according to claim 38.
